CERT	CERT	UEI	NAICS ON AWARD
SDVOSB	HUBZone Active	YJKQKW6R4BM1	562219

ABOUT

Vision Research Group (VRG) is a Service-Disabled Veteran-Owned Small Business and HUBZone firm that performs specialized industrial cleaning for federal requirements — dry dock suction chambers, tanks, confined spaces, oil-water separators, bilges and oily waste — with qualified performers under VRG's management. Principal office in Lynnwood, Washington.

AWARDED PAST PERFORMANCE

DOD — U.S. NAVY — PERFORMANCE COMPLETE

Dry dock suction chamber cleaning

Pearl Harbor Naval Shipyard & IMF · Oahu, Hawaii · Aug 2025 – Jun 2026

Prime · competitive small-business set-aside

DOD — U.S. NAVY — ACTIVE

Dry dock suction chamber cleaning in accordance with the PWS

Pearl Harbor Naval Shipyard & IMF · Oahu, Hawaii · Awarded Sep 2026

Prime · performed with a qualified local cleaning partner under VRG's management

NAICS ON THESE AWARDS

562219 Other Nonhazardous Waste Treatment & Disposal — Dry dock suction chamber cleaning, Pearl Harbor (2025, 2026)

Codes on VRG's awards, each verifiable under UEI YJKQKW6R4BM1on USAspending.gov. For the codes on VRG's SAM registration, read the entity record at SAM.gov.

SCOPES VRG PRICES AND PERFORMS

Capability, not past performance. The awarded rows are the separate, verifiable claim.

Tanks and bilges. Ballast, fuel, oily-water and potable tanks; bilge spaces. Cleaning, residue removal, and turnover in a condition an inspector will sign.

Confined-space entry. Permit-required entry with attendant, gas-free testing before and during, and a rescue plan on site rather than on paper.

Oil-water separators. Pump-out, cleaning, and inspection access on OWS units — the scope that most often sits behind a facilities requirement rather than in front of it.

Oily and non-hazardous waste. Characterisation, manifested transport and disposal through licensed facilities, with the paperwork a contracting officer needs for closeout.

HOW THE WORK RUNS

The site visit happens before the price
Access, lay-down space, shore connections and the actual condition of the space drive the cost more than the square footage does. A quote written without seeing them is a guess, and a guess on a confined-space job is the kind that gets re-priced mid-performance.

Qualified performers, named before award where you want them named
VRG prices this work with performers who hold the quals for it. Who they are is on the table during the quote, not after — and VRG does not pass a requirement to a subcontractor without telling the buyer.

Closeout is part of the scope, not after it
Disposal manifests, gas-free certificates, entry permits and the final receiving report are the deliverable as much as the clean space is. The job is done when the file is complete.

SAFETY AND QUALIFICATIONS

For specialized-cleaning work the applicable safety and technical requirements — confined-space entry, hazardous-waste handling and the site's own access controls — are met by the performing partner that holds the qualification, verified against the solicitation before award. VRG does not present a partner's licence or certification as its own.
